DETAILED ACTION

1. Applicant's response filed 4/22/2010 amended independent claim 11 and added new claims 15-16. Applicant's amendments and arguments were persuasive in overcoming the 35 USC 103 rejection over Chen from the office action mailed on 3/5/2009 and therefore this rejection is withdrawn. For reasons discussed below claims 4-5 and 9-14 are allowable.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: it is well known in the art to use fireplaces that do not have a vent because of their efficiency, cost effectiveness and ease of installation. Also, very common are rectangular flame patterns as many combustible materials allow for rectangular patterns. However, not known in the art are single, rectangular fuel cartridges with gelled fuel wherein the housing structure the top of the housing structure is rigidly connected to the left, right, front and back walls of the housing structure and is imperforate except for an opening of predetermined, constant size from which a rectangular flame emanates.

Chen, US Patent No. 5,199,413 discloses a mobile spirit stove comprising an alcohol fuel container to hold alcohol fuel (elongate bottom, front and back walls; a left-side wall; a right side wall), a perforated rectangular shaped cover having straight parallel regular and equally curved ridges and hollows and having holes over the ridges through which alcohol fuel gas (flammable vapors) flows out of the container for making fires and holes over the hollows through which outside air is induced into the alcohol

fuel container for circulation (see abstract and Figs 1 and 2). Chen teaches that a rectangular cover is inserted over the perforated cover but there is no teaching in Chen that the cover is rigidly attached to the rest of the container. Furthermore, the alcohol gel is of made up of fibers and therefore is not of a gelatinous substance.

Kaufman, US Patent No. 6,035,768 discloses a portable heat unit comprising a number of rectangular panels joined to form an open-ended box with a lid, with a rigid member placed between two panels to permit control of burning of the fuel, heat flow, temperature and to define an opening through which the fuel can be exposed to air. The fuel can be a sterno can which is gelatinous fuel. Kaufman does not, however, disclose the lid being imperforate except for a top opening and the rest of the rectangular housing of Kaufman has vent panels which are not present in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
